

Initial Prompt

{
With the following PDF and using the following list of categories,

- a) Key technical topics discussed
- b) Industry trends and innovations
- c) Career opportunities and job postings
- d) Professional development and CPD resources
- e) Networking and mentoring opportunities
- f) Power systems and energy transition updates
- g) Automation, control systems, and digital engineering topics
- h) Research, standards, and regulatory developments
- i) Industry events, webinars, and conferences
- j) Alumni achievements and success stories

turn it into a professional bullet-point summary suitable for sharing with Electrical Engineering alumni on LinkedIn.

}

Initial Response

{
Here is a professional Electrical Engineering alumni summary based on the EE&T community activity captured in the PDF.

UNSW EE&T Alumni Community Update – June/July 2026

a) Key Technical Topics Discussed

- * Quantum computing, quantum error correction, and quantum engineering advancements.
- * Power electronics, grid-forming converters, power system stability, and renewable energy integration.
- * Digital real-time simulation, hardware-in-the-loop (HIL) systems, and power system digital twins.
- * AI-driven network observability, automated fault analysis, and network operations.
- * Signal processing applications in defence, sonar systems, Wi-Fi sensing, and embedded systems.
- * Space engineering, GNSS technologies, CubeSat missions, and satellite navigation.

b) Industry Trends and Innovations

- * Rapid growth in quantum technologies and semiconductor-based quantum processors.
- * Increasing adoption of AI for network automation and operational intelligence.
- * Expansion of digital engineering tools supporting energy transition initiatives.
- * Development of advanced converter technologies for renewable-energy-dominated grids.
- * Growing focus on battery integration, electrification, and grid modernisation.

c) Career Opportunities and Job Postings

- * Administrative and operational roles within UNSW EE&T.
- * Industry engagement opportunities through ELSOC Industry Night and Alumni Night.
- * Exposure to employers across energy, telecommunications, consulting, defence, infrastructure, and technology sectors including Transgrid, Telstra, Aurecon, AECOM, GHD, EY, Engineers Australia, and others.
- * Career discussions highlighting pathways into power systems, transmission, operations, consulting, startups, and research.

d) Professional Development and CPD Resources

- * Leadership development opportunities through UNSW Alumni programs.
- * Research seminars, podcasts, technical presentations, and webinars.
- * Three Minute Thesis (3MT) competition showcasing research communication skills.
- * Educational resources covering quantum engineering, energy systems, and digital simulation technologies.

e) Networking and Mentoring Opportunities

- * ELSOC Alumni Night celebrating its 10th year of connecting students, graduates, academics, and industry.
- * ELSOC Industry Night providing direct access to recruiters, engineers, and industry leaders.
- * Postgraduate networking events through STEEP.
- * Strong alumni participation in mentoring, career guidance, and student engagement activities.

f) Power Systems and Energy Transition Updates

- * Research advancing grid-forming converter technologies and renewable energy integration.
- * Real-time simulation and HIL applications supporting workforce development for the energy transition.
- * Industry discussions on home batteries, grid services, electrification, and decarbonisation.
- * Ongoing collaboration between academia and industry to address future power system challenges.

g) Automation, Control Systems, and Digital Engineering Topics

- * AI-powered traffic anomaly detection and automated root-cause analysis.
- * Real-time power system simulation and digital twin technologies.
- * Advanced control methods for grid-forming converters.
- * Energy management systems, operational analytics, and market control software.
- * Signal processing innovations for sensing, communications, and defence applications.

h) Research, Standards, and Regulatory Developments

- * IEEE publications in power electronics, renewable energy systems, and converter control.
- * Research contributions influencing future electrical safety initiatives and industry collaboration.
- * Recognition of internationally published work in embedded systems, sensing, and signal processing.
- * Increased focus on standards supporting energy transition technologies and modern power networks.

i) Industry Events, Webinars, and Conferences

- * ELSOC Industry Night and Alumni Night.
- * Women in Engineering Awards 2026.
- * IEEE ICASSP 2026 and IEEE Signal Processing Society Entrepreneurship Forum.
- * Quantum engineering presentations and public research talks.
- * Energy roundtables focused on battery integration and grid innovation.
- * International conferences highlighting UNSW EE&T research leadership.

j) Alumni Achievements and Success Stories

- * Recognition of EE&T academics through promotions, awards, and international honours.
- * Professor E. Ambikairajah AO formally invested as an Officer of the Order of Australia.
- * EE&T alumni and researchers receiving international awards and research recognition.
- * Continued success of UNSW quantum spinout Diraq and other research-commercialisation ventures.
- * Strong alumni leadership supporting student development, industry engagement, and community growth.
- * Ongoing contributions from alumni across power systems, telecommunications, research, entrepreneurship, and engineering leadership.

****Overall Theme:****

The EE&T community continues to demonstrate strong momentum across quantum technologies, energy transition, AI, digital engineering, industry engagement, research excellence, and alumni-led mentoring—creating valuable opportunities for both current students and graduates while strengthening connections between academia and industry.

This version is ready to post directly to LinkedIn or circulate to the EE&T alumni community. I can also condense it to a 300-word, 500-word, or LinkedIn-style post format if needed.

}

Prompt 2:

Please condense the earlier response to 500-words

{

Here's a condensed version of approximately 500 words suitable for sharing with Electrical Engineering alumni on LinkedIn.

UNSW Electrical Engineering & Telecommunications (EE&T) Community Update

The EE&T community continues to demonstrate strong engagement across research, industry collaboration, professional development, and alumni involvement. Recent activity highlights significant progress in quantum technologies, power systems, telecommunications, signal processing, artificial intelligence, and space engineering.

Technical and Industry Highlights

Key topics included quantum computing, quantum error correction, power electronics, grid-forming converters, digital real-time simulation, hardware-in-the-loop testing, AI-enabled network observability, signal processing, satellite navigation, GNSS technologies, and CubeSat missions. Researchers also showcased innovations in power system digital twins, defence applications, embedded sensing, and advanced communications.

Industry trends reflected growing momentum in renewable energy integration, electrification, battery storage, digital engineering, AI-assisted operations, and the commercialisation of emerging technologies. Particular attention was given to technologies supporting Australia's energy transition and future power system resilience.

Career Development and Industry Engagement

ELSOC Industry Night and the upcoming Alumni Night continue to provide valuable opportunities for students, alumni, academics, and employers to connect. Students gained direct access to professionals from energy, telecommunications, consulting, defence, infrastructure, and technology sectors, while alumni shared practical career insights across power systems, operations, consulting, startups, and research.

Professional development opportunities included leadership programs, technical presentations, research seminars, podcasts, webinars, and the Three Minute Thesis (3MT) competition. These initiatives support both technical growth and communication skills development for engineers at all career stages.

Research, Innovation and Energy Transition

Research excellence remained a major focus, with internationally recognised work in quantum engineering, power electronics, renewable energy systems, digital simulation, Wi-Fi sensing, signal processing, and electrical safety. Notable contributions explored grid-forming converter technologies, power system

stability, real-time simulation, and training methods designed to prepare engineers for future energy networks.

Energy transition discussions highlighted renewable integration, home battery deployment, electrification, decarbonisation, and grid innovation. Collaboration between universities, industry, and professional bodies continues to strengthen Australia's capability to address future energy challenges.

Community, Networking and Recognition

The EE&T community maintained a strong commitment to networking and mentoring through alumni events, postgraduate networking initiatives, industry engagement activities, and student support programs. These activities continue to strengthen links between graduates, students, researchers, and industry leaders.

The community also celebrated numerous achievements, including academic promotions, international research awards, scholarships, entrepreneurship successes, and leadership recognition. Highlights included the continued global success of quantum technology ventures such as Diraq, recognition of EE&T researchers through prestigious publications and awards, and the formal investiture of Professor E. Ambikairajah AO for distinguished service to engineering, education, innovation, and the broader community.

Overall

The recurring themes across the EE&T community are innovation, industry impact, research excellence, leadership, and alumni engagement. From quantum computing and AI to power systems and energy transition, the School continues to produce graduates, researchers, and industry leaders who are shaping the future of engineering in Australia and globally.

If you'd like a version optimized specifically for LinkedIn engagement, I can also reduce this to about 300 words with stronger alumni-focused messaging and a closing call-to-action.

}

Prompt 3:

Reduce this to about 300 words with stronger alumni-focused messaging and a closing call-to-action

{

Here's a LinkedIn-ready version of approximately 300 words with a stronger alumni focus and a call-to-action.

The UNSW Electrical Engineering & Telecommunications (EE&T) community continues to demonstrate the strength of its alumni, students, academics, and industry partners through innovation, mentorship, and professional engagement.

Recent community discussions highlighted advances in quantum computing, AI, telecommunications, signal processing, power electronics, renewable energy integration, digital engineering, and space technologies. Research breakthroughs in quantum error correction, grid-forming converters, digital twins, real-time simulation, and AI-enabled network operations showcase the breadth of expertise emerging from EE&T.

Industry engagement remains a key strength. ELSOC Industry Night and Alumni Night continue to connect students with graduates working across power systems, energy markets, telecommunications, consulting, infrastructure, defence, technology, and research. These events provide practical career guidance, mentoring opportunities, and valuable professional networks that help bridge the gap between university and industry.

The community also celebrated outstanding achievements, including academic promotions, international research awards, entrepreneurship successes, leadership recognition, and the continued growth of globally recognised ventures such as Diraq. Research contributions are helping shape the future of quantum technologies, renewable energy systems, electrical safety, AI applications, and Australia's energy transition.

Perhaps most importantly, the alumni community continues to play a vital role in supporting the next generation of engineers. Whether through mentoring, sharing career experiences, participating in events, or fostering industry connections, alumni remain an important part of the EE&T ecosystem.

As graduates of EE&T, we all have knowledge, experience, and perspectives that can help those following behind us. Consider attending future alumni events, reconnecting with classmates, supporting student initiatives, or sharing your professional journey with current students.

Together, we can continue strengthening the EE&T community and help develop the engineers who will shape the future of our profession.

Feel free to share your own EE&T memories, career lessons, or current projects in the comments and help keep our alumni network active and connected.

}

Prompt 4:

Give me a version optimized specifically for LinkedIn engagement

```
{
```

Here's a LinkedIn-optimized version designed to encourage engagement, comments, and alumni participation while maintaining a professional tone.

✂ What are the biggest opportunities and challenges facing Electrical Engineers today?

Recent activity across the UNSW Electrical Engineering & Telecommunications (EE&T) community points to a profession undergoing rapid transformation. Quantum computing, AI, renewable energy integration, grid-forming converters, digital twins, advanced telecommunications, signal processing, and space technologies are moving from research labs into real-world applications.

At the same time, events such as ELSOC Industry Night and Alumni Night continue to highlight something equally important: the value of connecting generations of engineers. Students are seeking practical advice, career insights, and industry perspectives, while alumni bring years of experience gained across power systems, telecommunications, consulting, defence, infrastructure, technology, research, and entrepreneurship.

The community has also celebrated outstanding achievements in research, innovation, leadership, and commercialisation. From internationally recognised quantum technology ventures and energy-transition research to award-winning academics, researchers, and students, EE&T continues to make a significant contribution to Australia's engineering future.

One message stands out: technical expertise matters, but so do relationships, mentorship, curiosity, and a willingness to share knowledge.

For alumni, a conversation with a student, attendance at an event, or a few words of career advice can have a lasting impact. Many of us benefited from those who came before us; now we have an opportunity to do the same for the next generation.

💡 I'd be interested to hear from fellow EE&T alumni:

- What technology has most changed your career?
- What advice would you give today's engineering students?
- Which skills do you believe will be most important over the next decade?
- How can alumni better support students and young engineers?

Please share your thoughts, experiences, and lessons learned below. Let's continue building a strong and connected EE&T community for the engineers who follow us.

This version is structured to maximize LinkedIn comments by opening with a question, using short paragraphs, and ending with specific discussion prompts.
